

## The Physician Alliance selects practices for Patient Centered Specialty Practice Designation

The Physician Alliance created the Patient Centered Specialty Practice Designation program to recognize the importance of collaboration with specialty and subspecialty practices to achieve the goal of improved care integration and coordination within the Patient Centered Medical Home—Neighborhood care delivery model. The only specialty designation program in Michigan, TPA's program focuses on coordination and sharing of information among primary care physicians and specialists.

The Physician Alliance is honored to work with these high-functioning practices, representing 196 specialty physicians, that demonstrate excellence in patient-centered processes and quality.
